Lesson

1 *Introduction*

Welcome to self-paced training for Solid Edge. This course is designed to educate you in the use of Solid Edge. The course is self-paced and contains instruction followed by activities.

Solid Edge self-paced courses

- **spse01510**—Sketching
- **spse01515**—Constructing base features
- **spse01520**—Moving and rotating faces
- **spse01525**—Working with face relationships
- **spse01530**—Constructing treatment features
- **spse01535**—Constructing procedural features
- **spse01536**—Modeling synchronous and ordered features
- **spse01540**—Modeling assemblies
- **spse01541**—Explode-Render-Animate
- **spse01545**—Creating detailed drawings
- **spse01546**—Sheet metal design
- **spse01550**—Practicing your skills with projects
- **spse01560**—Modeling a Part Using Surfaces
- **spse01610**—Solid Edge frame design
- **spse01640**—Assembly patterning
- **spse01645**—Assembly systems libraries
- **spse01650**—Working with large assemblies
- **spse01655**—Revising assemblies
- **spse01660**—Assembly reports
- **spse01665**—Replacing parts in an assembly

- **spse01670**—Designing in the context of an assembly
- **spse01675**—Assembly features
- **spse01680**—Inspecting assemblies
- **spse01685**—Alternate assemblies
- **spse01690**—Virtual components in assemblies
- **spse01695**—XpresRoute (tubing)
- **spse01696**—Creating a Wire Harness with Harness Design
- **spse01424**—Working with Solid Edge Embedded Client

Start with the tutorials

Self-paced training begins where tutorials end. Tutorials are the quickest way for you to become familiar with the basics of using Solid Edge. If you do not have any experience with Solid Edge, please start by working through the tutorials for basic part modeling and editing before starting this self-paced training.

Lesson

2 *Additional modeling projects*

Introduction

This section contains additional parts for modeling practice. Each part in this section can be created in several different methods using a variety of commands in Solid Edge. There is no correct or incorrect method to create these parts. Experiment with different commands and options in an effort to learn as much about each command as possible. There is an isometric view of each part to give you a better idea as to what the finished part looks like. There are also principal views that contain the dimensions needed to create the part. There may be more dimensions than are needed in the drawings.

Base plate

Bearing block A

Bearing block B

Column base

Dovetail bracket

Dovetail stop

Gland blank

Gland

Guide plate

Head attachment

Head yoke

Rod support

Saw blade

S-bracket

Side beam bracket

Slide stop

Slotted link

Swivel plate

Trunnion plate

Lesson

3 *Construct a bicycle hand tool*

Model a wrench used specifically for removing the pedal cranks from a bicycle.

Major dimensions

- ▶ Use the following dimensions when constructing the overall shape of the tool.

Socket and wrench dimensions

- ▶ Use the following dimensions when constructing the socket and Allen wrench.

Lesson

4 *Construct an intercom speaker cover*

Create a cover plate for a ceiling-mounted intercom speaker.

Major Dimensions

Lesson

5 *Construct a bicycle saddle shell*

Transform a basic model into an anatomically correct shell for a bicycle saddle.

- ▶ Open *saddle_ex.par* from the zip file *spse01550.zip* you previously downloaded.

- ▶ Some hints:

- Finished saddle:

Note

Applying a texture is optional. See the Help topic on “Style Command” to learn more.
